

Tape- Information, Tips & Usage Guide

Gorilla Tape comes in a handy 1" wide 30 feet long roll and is an excellent addition to any tool box. It combines 3 layers; a double thickness adhesive, a tough reinforced backing, and a weather resistant shell and is double the thickness and stickier than regular duct tape. It will stick to almost any surface including wood, brick, plaster and stone and is ideal for quick repairs to cars and boats, or for marking out areas for DIY work.

2" tape is ideal for repairing or extending the lifespan of your polytarp. Made with strong flexible polythene with a powerful adhesive, it's waterproof and UV stabilised for long term repairs. It's ideal for repairing rips and tears in poly-tarps, can be used to join several tarps together, or can be used to reinforce stress points around eyelets. It's also ideal for repairing holes in awnings, tents, or polythene sheeting and because it's fully waterproof, it won't reduce the effectiveness of your cover. It is available in 4 different colours so you could even colour match it to your tarpaulin or polythene for a professional looking fix.

3" tape is made in much the same way as our 2" variety. It comes in Black, Blue & White It's made of tough waterproof and UV stabilised polyethylene, with a strong adhesive for excellent grip. Its larger size makes it ideal for larger rips and tears, and it can be used on both polytarps and PVC covers. You may also consider using our 3" tape for tents, hay covers, tents and awnings. It's also a massive 108 feet long!

Use

When using each of our adhesive products there are some simple rules to follow.

- Keep the surface you are using dry, moisture will mean that it will not stick as well.
- Apply tape at room temperature, this will mean that it will stick better.
- When attaching to sheets please apply to both sides when repairing.
- Leave a short amount of time for tape to settle.
- Please check packaging for further details.
